MPC's 3 Tier Bottle Roll Machine

Mineral Process Control has produced two versions of a three-tier bottle roll machine. One version was constructed to be flat packed for shipment by air.

Each machine consists of 15 x 3m long rollers in three layers of 5. The rollers are rubber coated and each roller is chain driven.

The machine has a capacity of around 250 x 4.5L jars. The air freight version capacity is slightly less.

The machine can also accommodate 2L as well as 1L jars.

The power requirement for the standard equipment is 415VAC, 50Hz, three-phase at 1.5KW. Other power supplies may be accommodated upon request.
